

HANDY MAN UNIT

If you have any comments, suggestions or questions, please send an email to: info@sawgrip.com

THANK YOU for purchasing SawGrip

You will enjoy the advantages of owning the SawGrip chainsaw carrier for your ATV. SawGrip is made to mount on the front rack. Your chainsaw sets horizontal with the rack.

INSTALLATION:

Remove mounting hardware from SawGrip mounting plate. Place mounting plate, (FIG. 1), on top of cargo rack. Move mounting plate around until you find the best place to mount it. You have to center over tubing or rail channels for best fit. Place front of mounting plate flush with front cargo rack bar for the best fit. This will allow for full use of cargo rack. If you mount to cargo rack tubing then you need to align mounting plate in the center of each tube on both sides and drill a 5/16" hole on both sides of each tubing. A 5/16" hole will allow for clearance for the U bolt. (FIG 2). U bolts will only fit around 3/4" tubing only. Tighten U bolts evenly. **DO NOT** over tighten or you could break the U bolt. The U bolts give a snug fit around tubing so mounting plate won't slip. If you application is mounting over rack channel rails then center on channels and drill a 5/16" hole and mount using the 5/16" bolts supplied and tighten (FIG. 3).

SET RESISTANCE:

After Saw Grip is bolted to ATV rack and tightened, open bar clamp up enough so chainsaw bar will go between the rubber pads. Tighten bottom lock nuts leaving about 1/8" gap (Fig. 3) then tighten top T - Handle about the same. Pull on saw. If saw moves easily, tighten bottom and top adjusting nuts and T- Handle until saw has enough resistance to slide out with minimal effort. Once the resistance is set correctly, you will be able to put the saw in or out without always adjusting the lower nuts. To lock saw in place, tighten only the top T-Handle until the saw can't be pulled out. It is recommended to remove saw from The SawGrip before transporting your ATV. **Total chainsaw length must not exceed the width of the ATV.**
